

3 best things about Night Mode

Camera Go's new Night Mode feature helps people take higher quality pictures in low-light environments by producing brighter and more accurate colors that are closer to life.

1. Capture high quality photos in low-light conditions

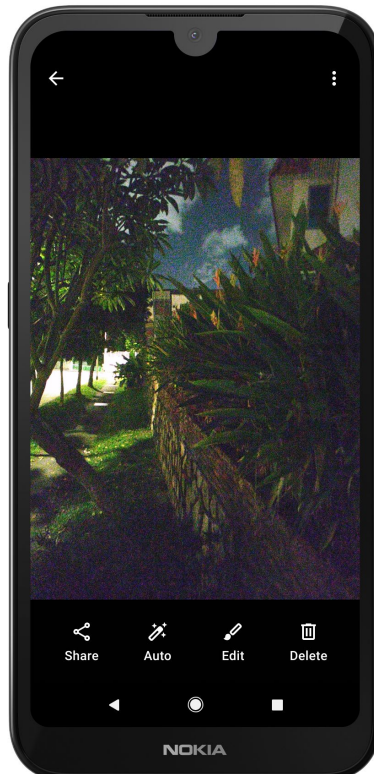

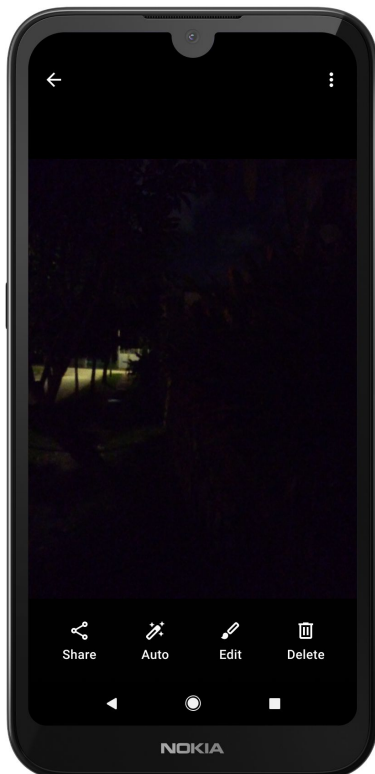

Night Mode helps users take higher quality pictures in low-light conditions, enabling them to capture photos both during the day and night.

2. An alternative to flash photography

Users can enable Night Mode before they take a photo as an alternative to flash photography where flash is not suitable.

3. No more complicated camera settings

Night Mode's automatic settings make it easy for users to take photos in darker environments without the need to adjust camera settings on their own.

Take brighter and more detailed pictures in low-light environments with Night Mode.
