# SIGNALPATH by verily

Verily's SignalPath is a state-of-the-art **Clinical Trials Management System (CTMS)** that improves the ease, quality and efficiency of conducting clinical research for study sites.

Empower optimal performance

Upgrade your study operations

Our data science and protocol experts unpack protocol complexities and convert them into automated study workflows for ease of setup and quality execution.

Track your site's performance

Centralize key performance metrics to help identify additional efficiencies.
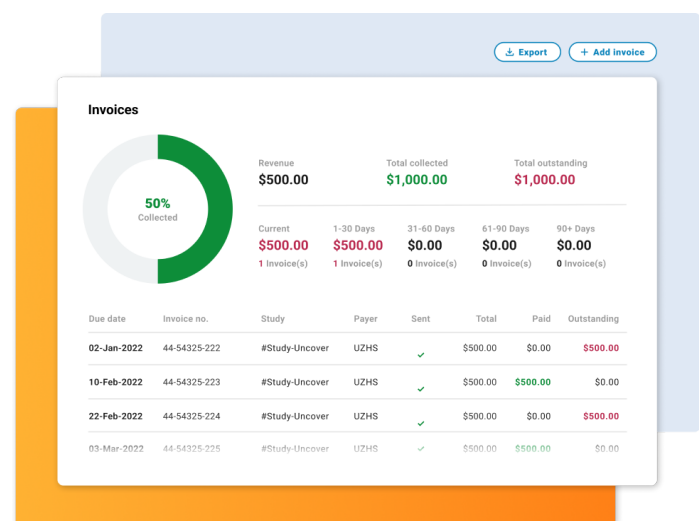

Maximize research revenue

Streamline your pre-award process

Our pre-award module optimizes billing calendar creation, budget preparations and study negotiations (including Medicare Coverage Analysis).

Enhance site profitability and optimize research cash flows

Our post-award module enables real-time account reconciliation, milestone tracking, invoicing, and financial reporting.

Integrate and unify solutions

Leverage existing investments in eClinical technologies

SignalPath offers multiple integrations across the eClinical ecosystem, configurable to your needs, including:

- Health system EHRs
- General ledgers
- Patient payments
- IRB and more.

Focus on what matters

SignalPath helps reduce duplication of tasks and mistakes to maximize data quality and impact.

Simplify workflows

Precisely the right information for each team member

SignalPath is built by researchers, for researchers. Our tools are designed to be intuitive and easy-to-use for each unique stakeholder on your team.

Find what you need, quickly and easily

Surface key information or documentation in a few clicks with minimal context shifting.
